

Creating Green Stormwater

Allen P. Davis

*Department of Civil and Environmental Engineering, and
Maryland Water Resources Research Center*

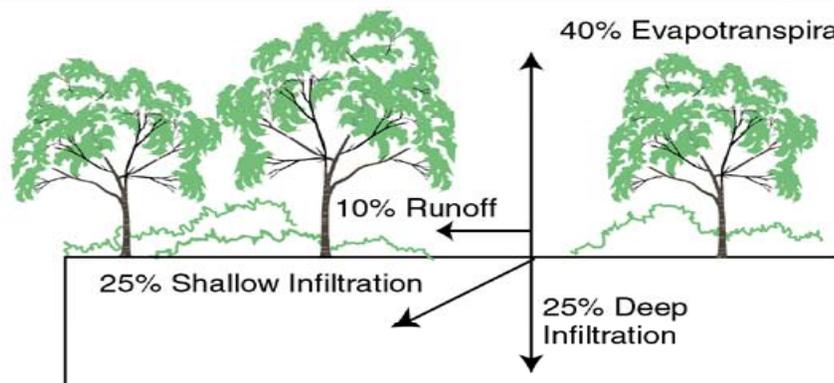

*University of Maryland
College Park, MD 20742*

October 9, 2009

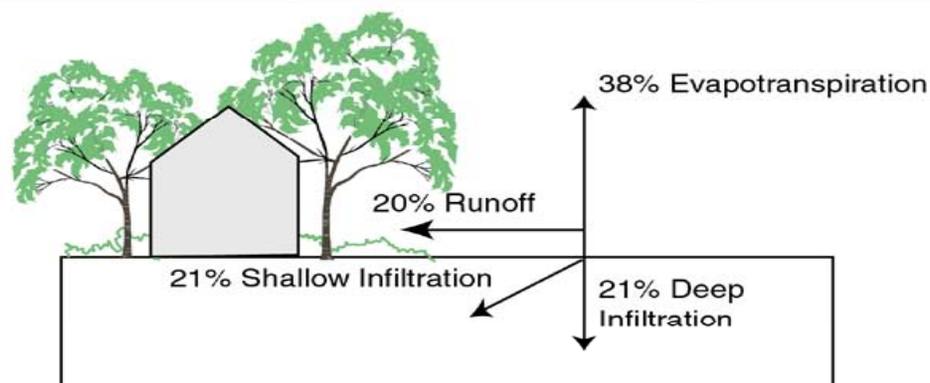

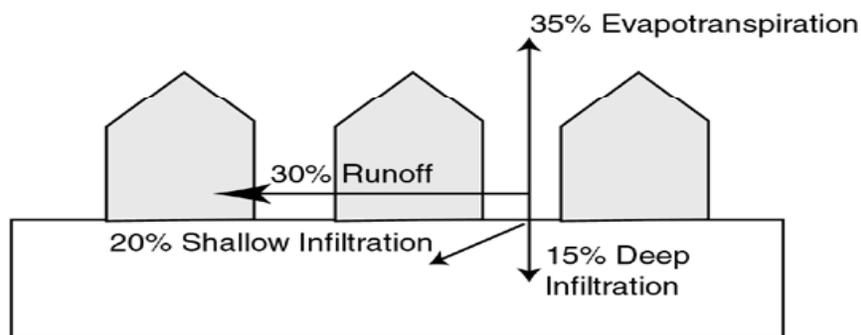

Urban Infrastructure, Imperviousness, and Runoff

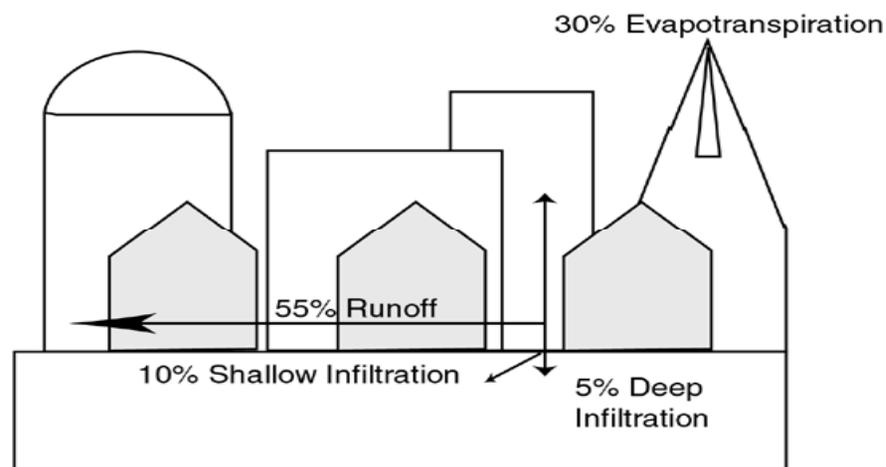

Natural Ground Cover

10% - 20% Impervious Surface

35% - 50% Impervious Surface

75% - 100% Impervious Surface

Changes in runoff flow resulting from increased impervious area (NC Dept. of Nat. Res. and Community Dev., in Livingston and McCarron, 1992.)

Conventional

Conventional

Erosive, Polluting, Ecological Impacts, Water Supply

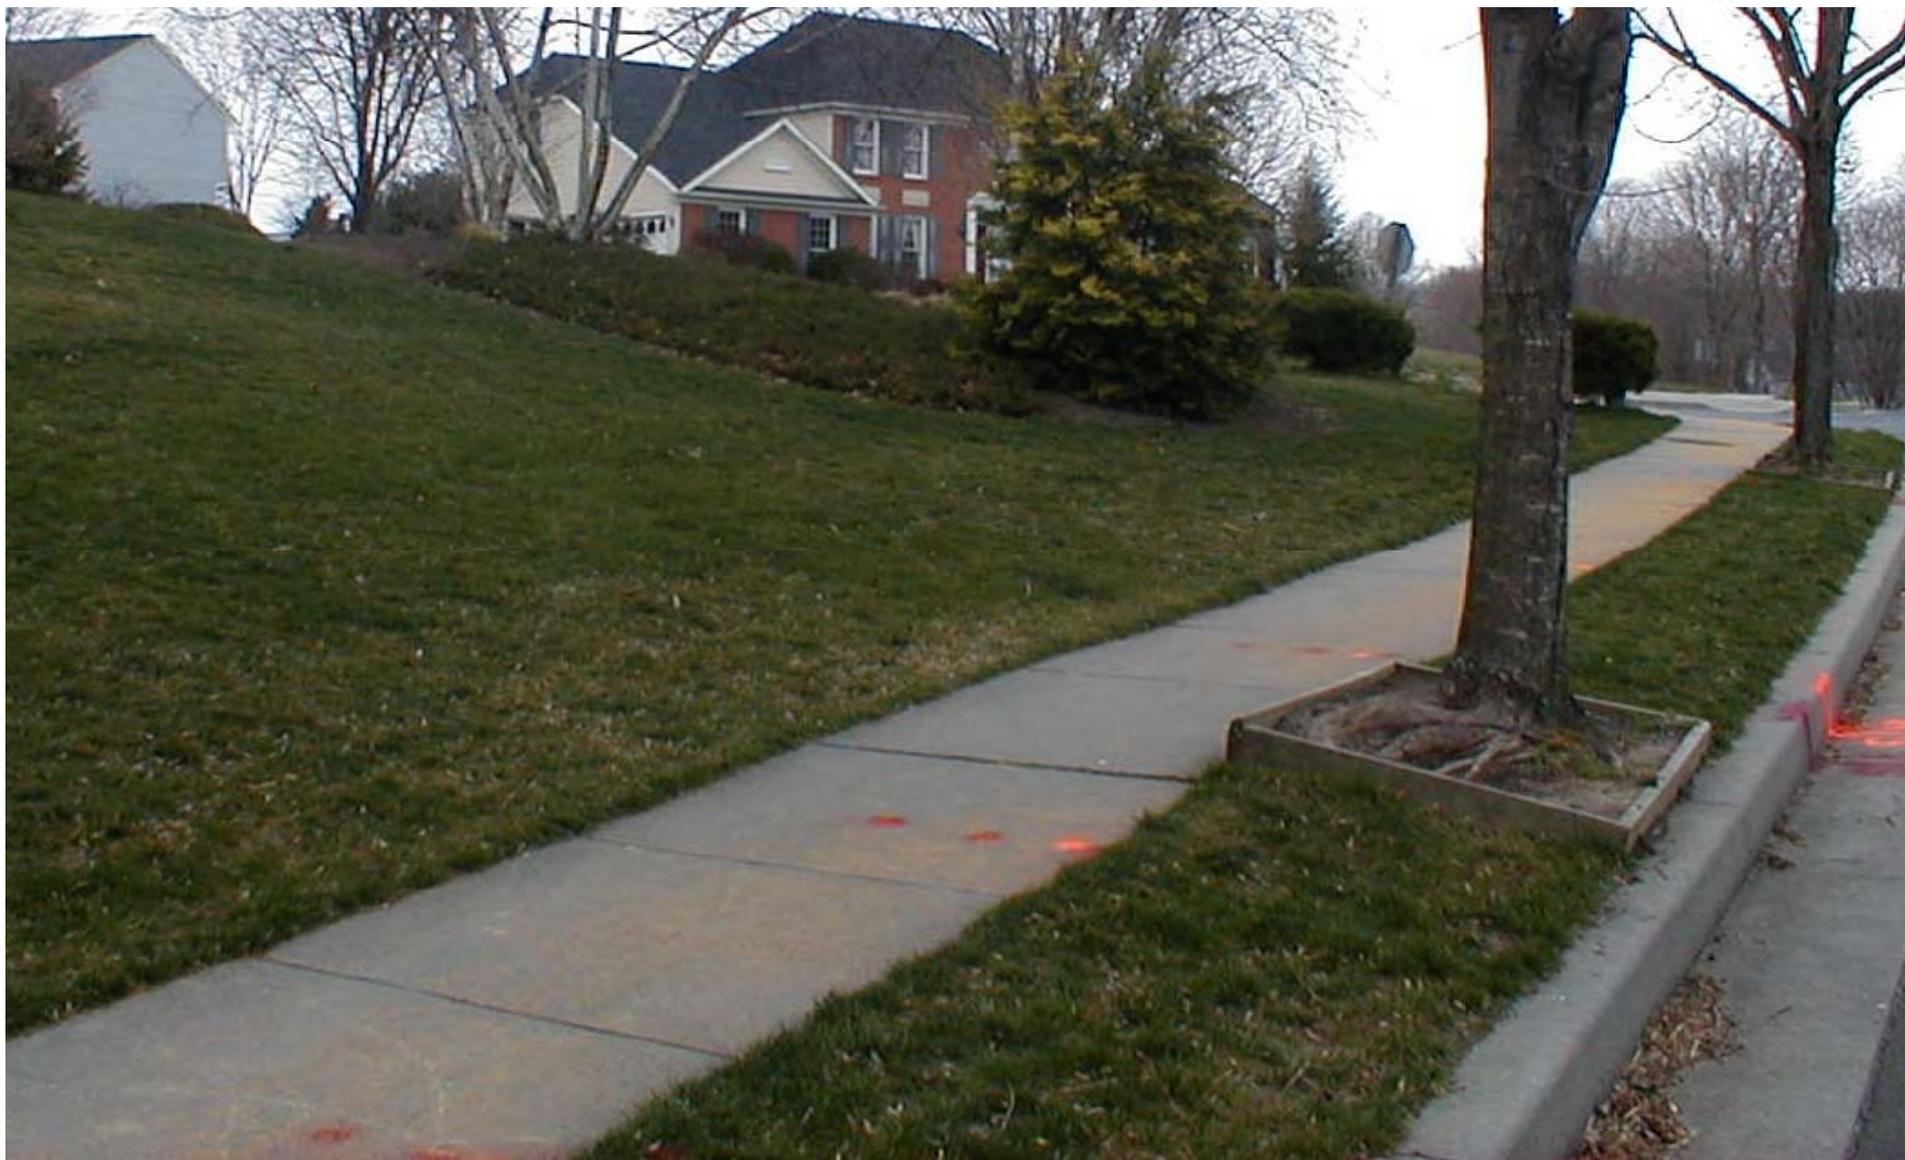

Sources of Pollutants

Sources of Pollutants

Nutrient Source

Sources of Pollutants

Novel Technologies

Bioretention

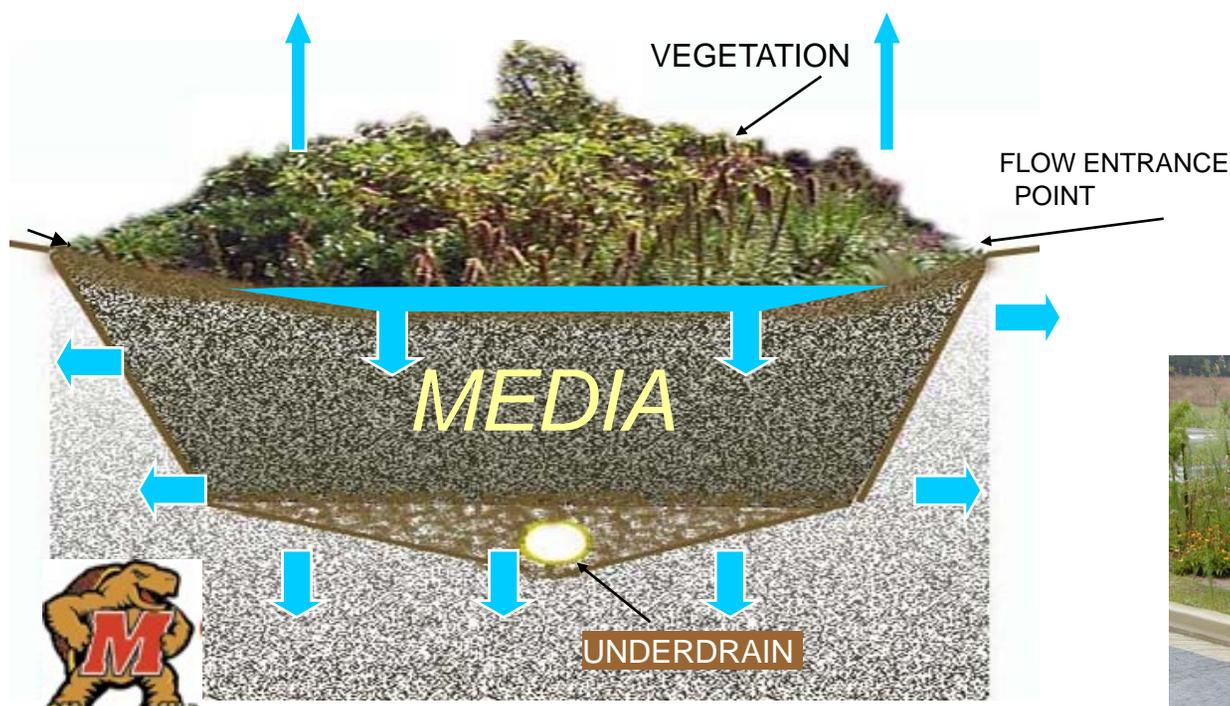

Bioretention (Rain Gardens)

Hydrology: Pooling, Infiltration,
& Evapotranspiration

Quality:

Filtration,
Adsorption,
Biodegradation

MEDIA: Sand, Soil,
Organic Matter

College Park

Bioretention

research &
monitoring

Silver Spring

Goals

- Hydrology Management
- Improvements in Water Quality
- Understand Fundamentals
- Facility Design
 - Size
 - Media
- Facility Management

Concurrent Challenge

- What are the proper metrics for success?

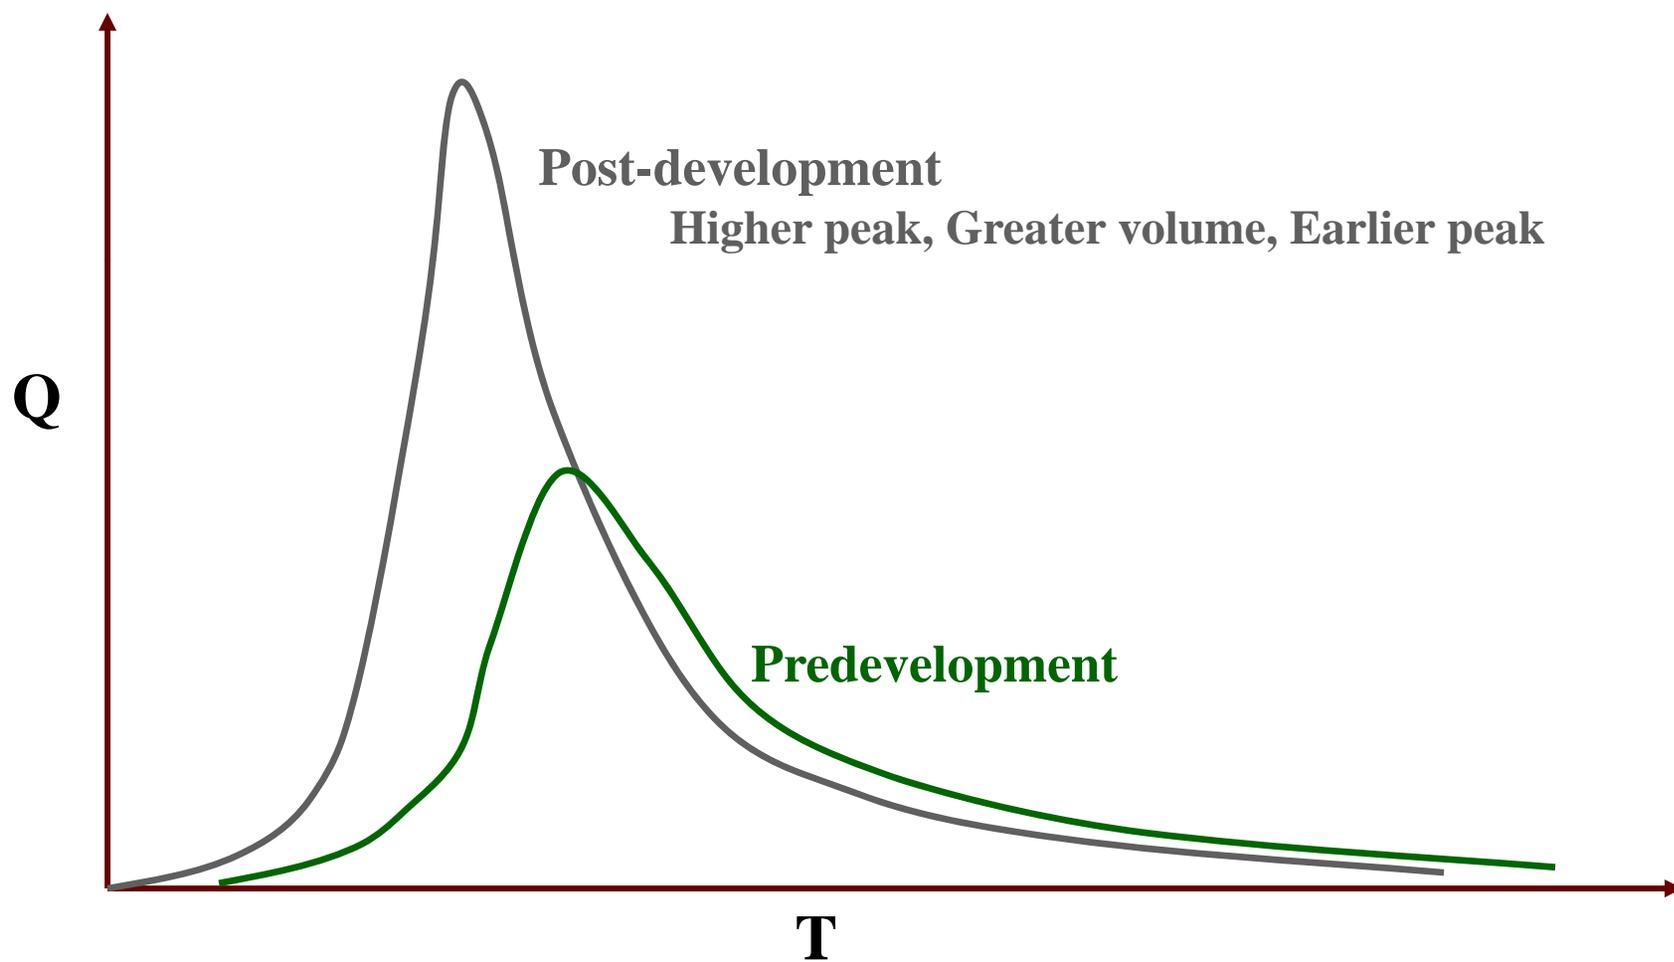

Hydrology

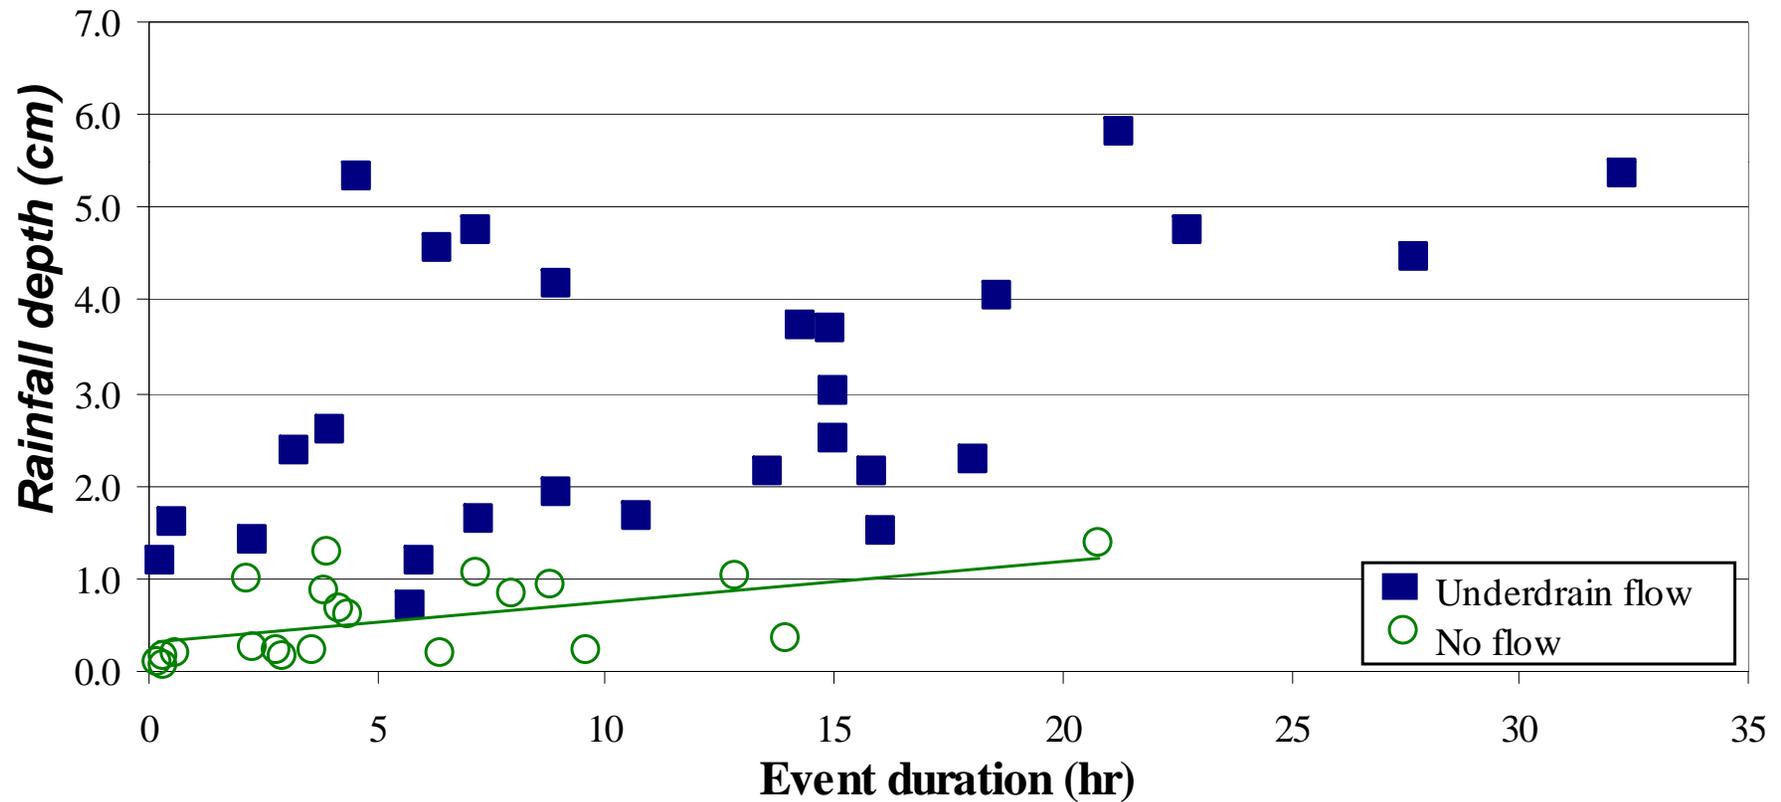

Hydrographs

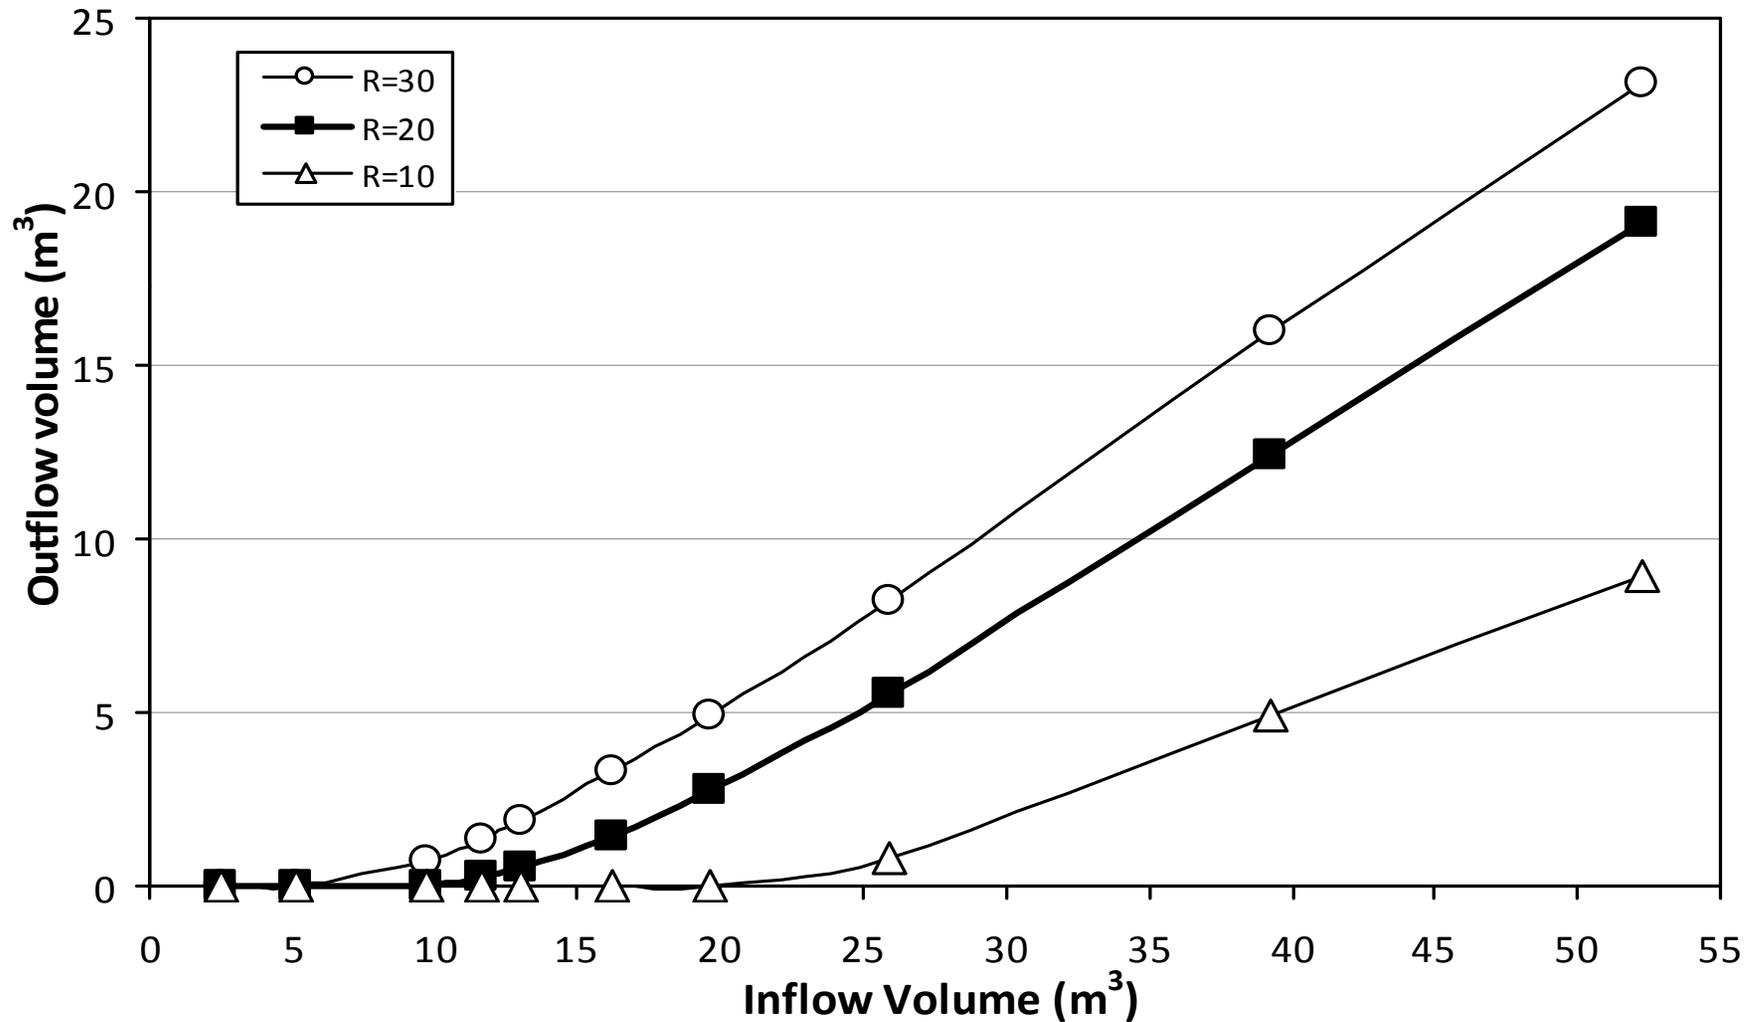

Discharge vs. Zero-discharge events

60 events, 23 with no discharge

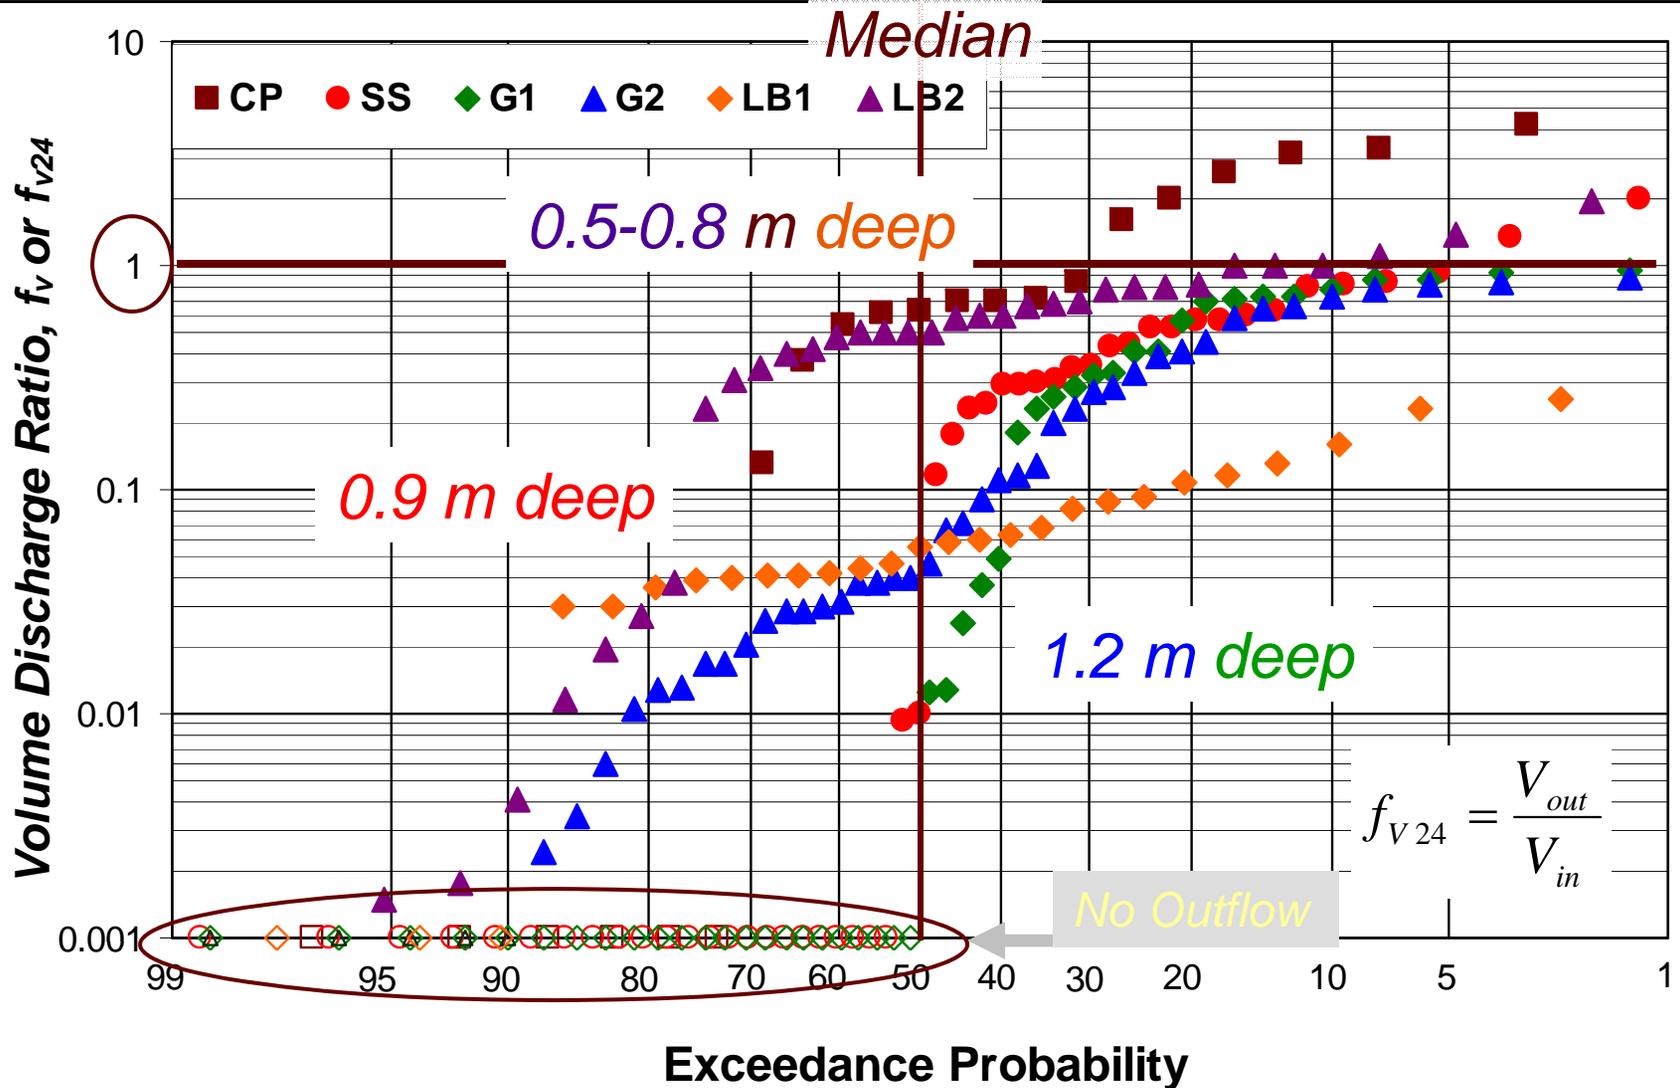

Bioretention Modeling: Size

Volume Reduction Ratio, f_v

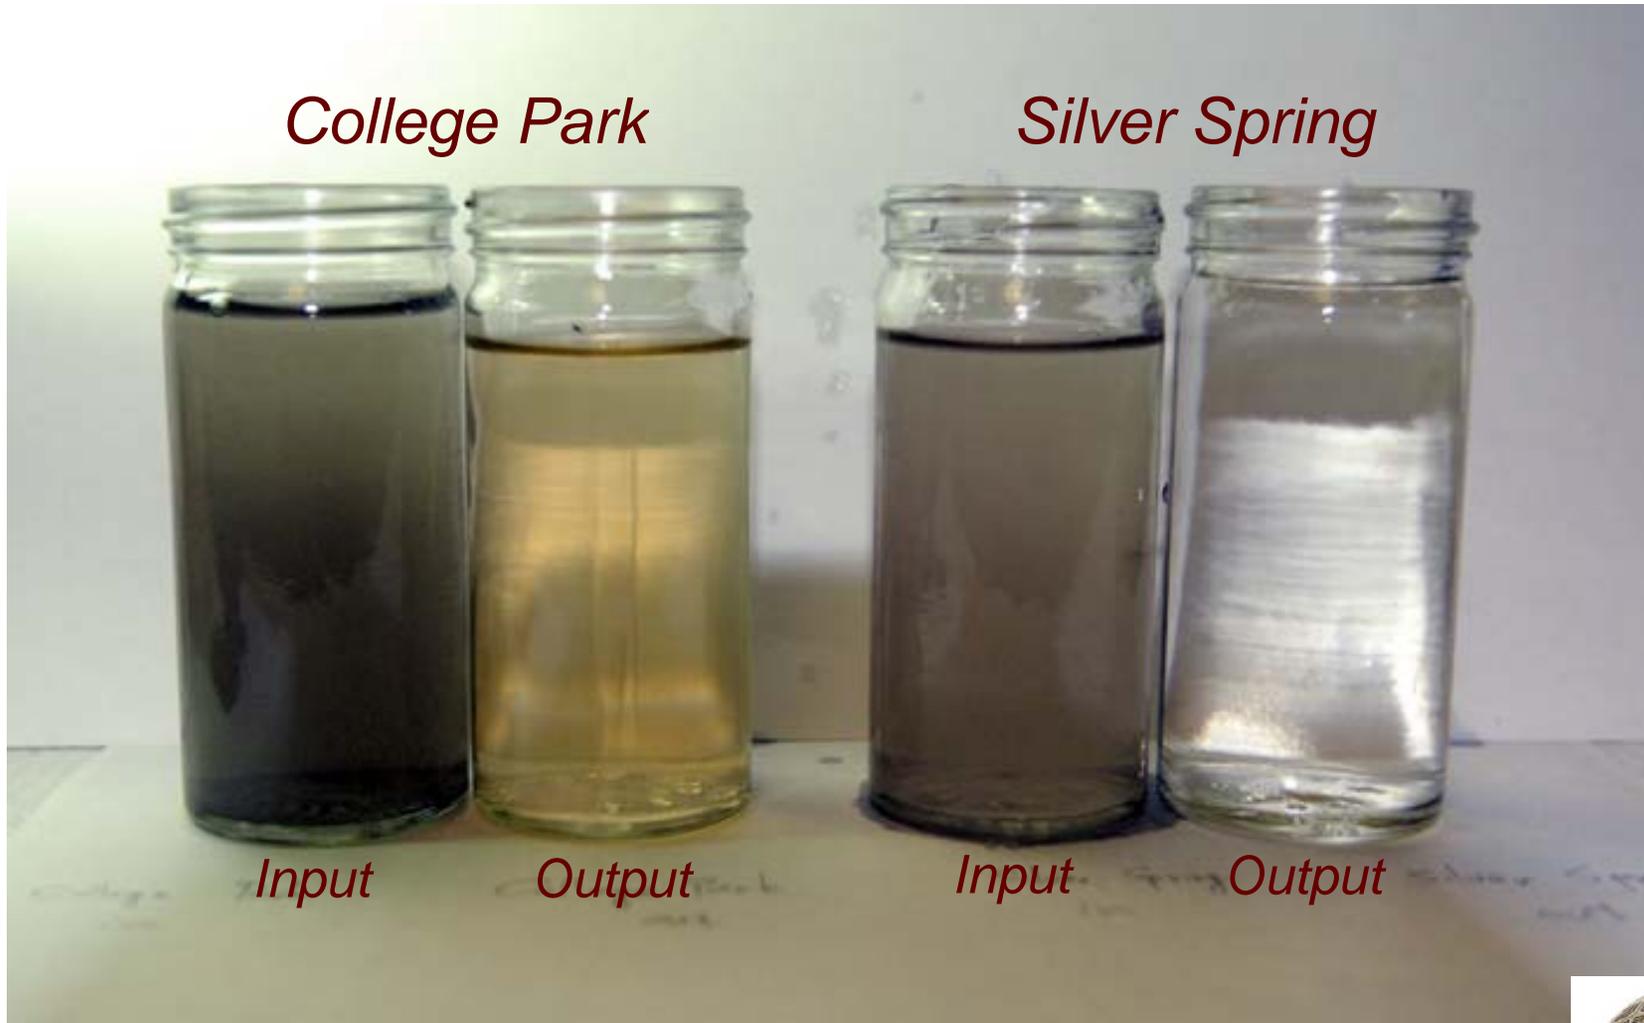

Water Quality

College Park

Silver Spring

Input

Output

Input

Output

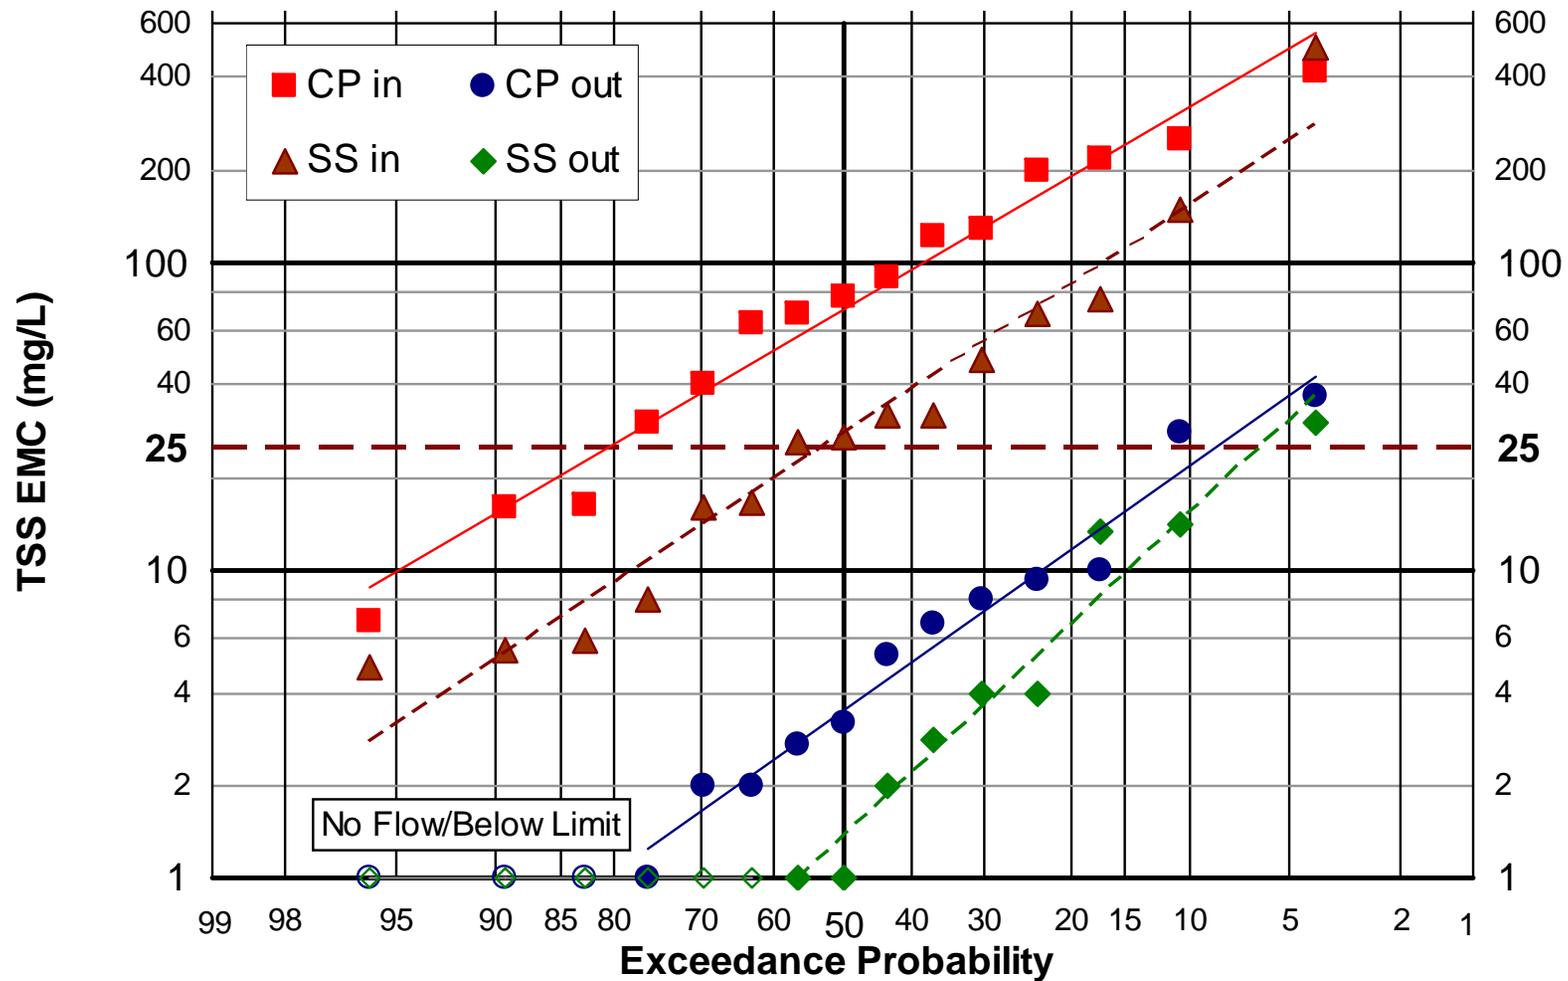

Particulate Matter & Bacteria

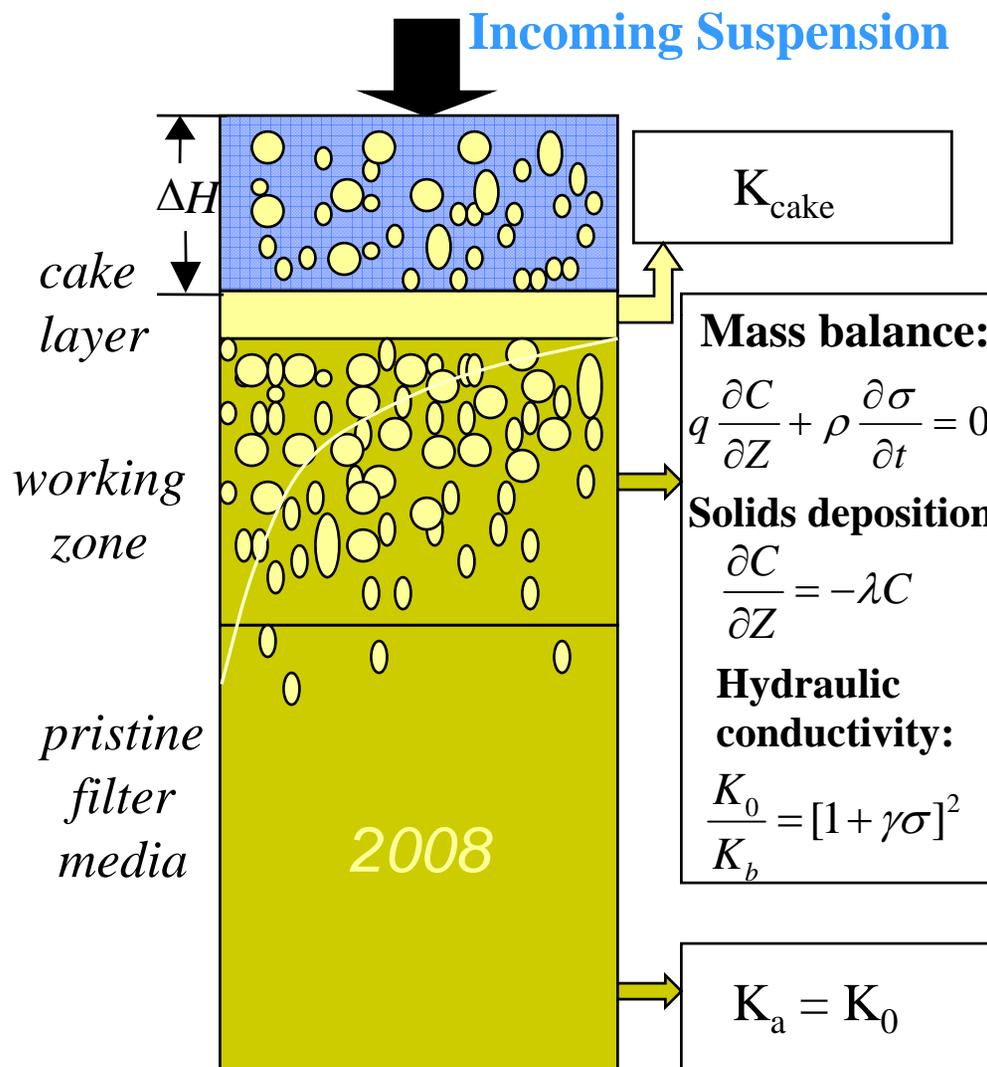

Bioretention TSS (CP & SS)

Suspended Solids Filtration

➤ A three-layer model

Bioretention

TSS Accumulation

- Intermittent flow conditions allow more particulate capture than continuous flow
- **SS do not penetrate below 5-20 cm in the media**
- Periodic surface media replacement can be used to recover hydraulic conductivity.

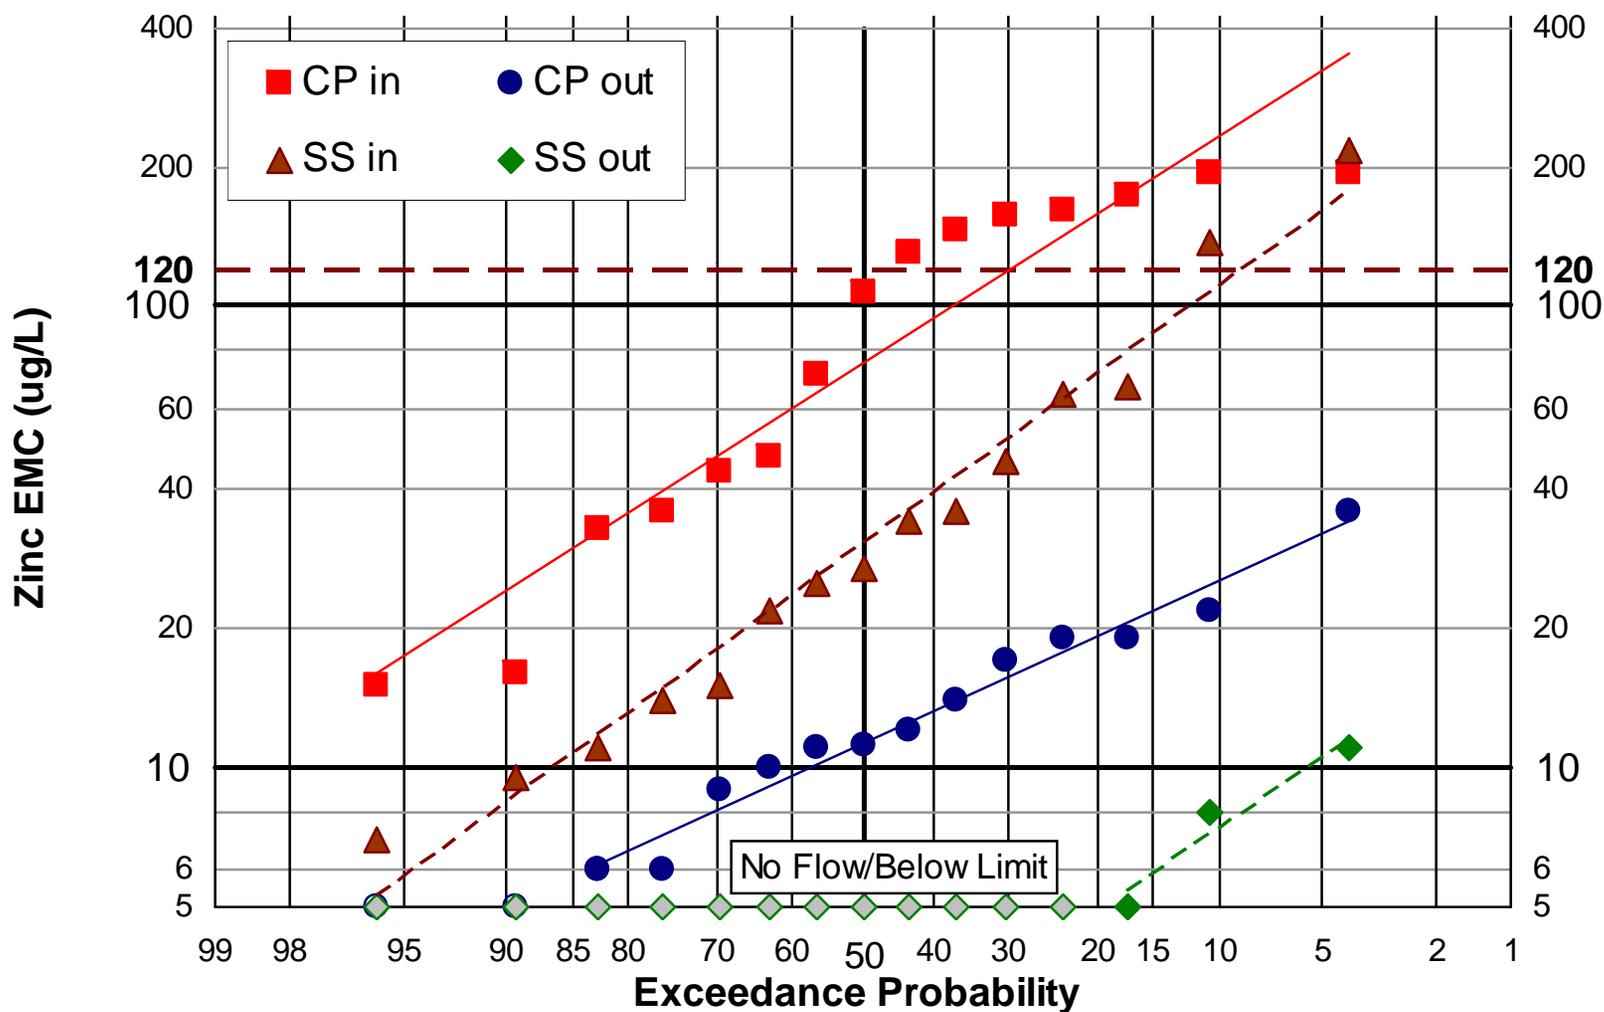

Metals & Hydrocarbons

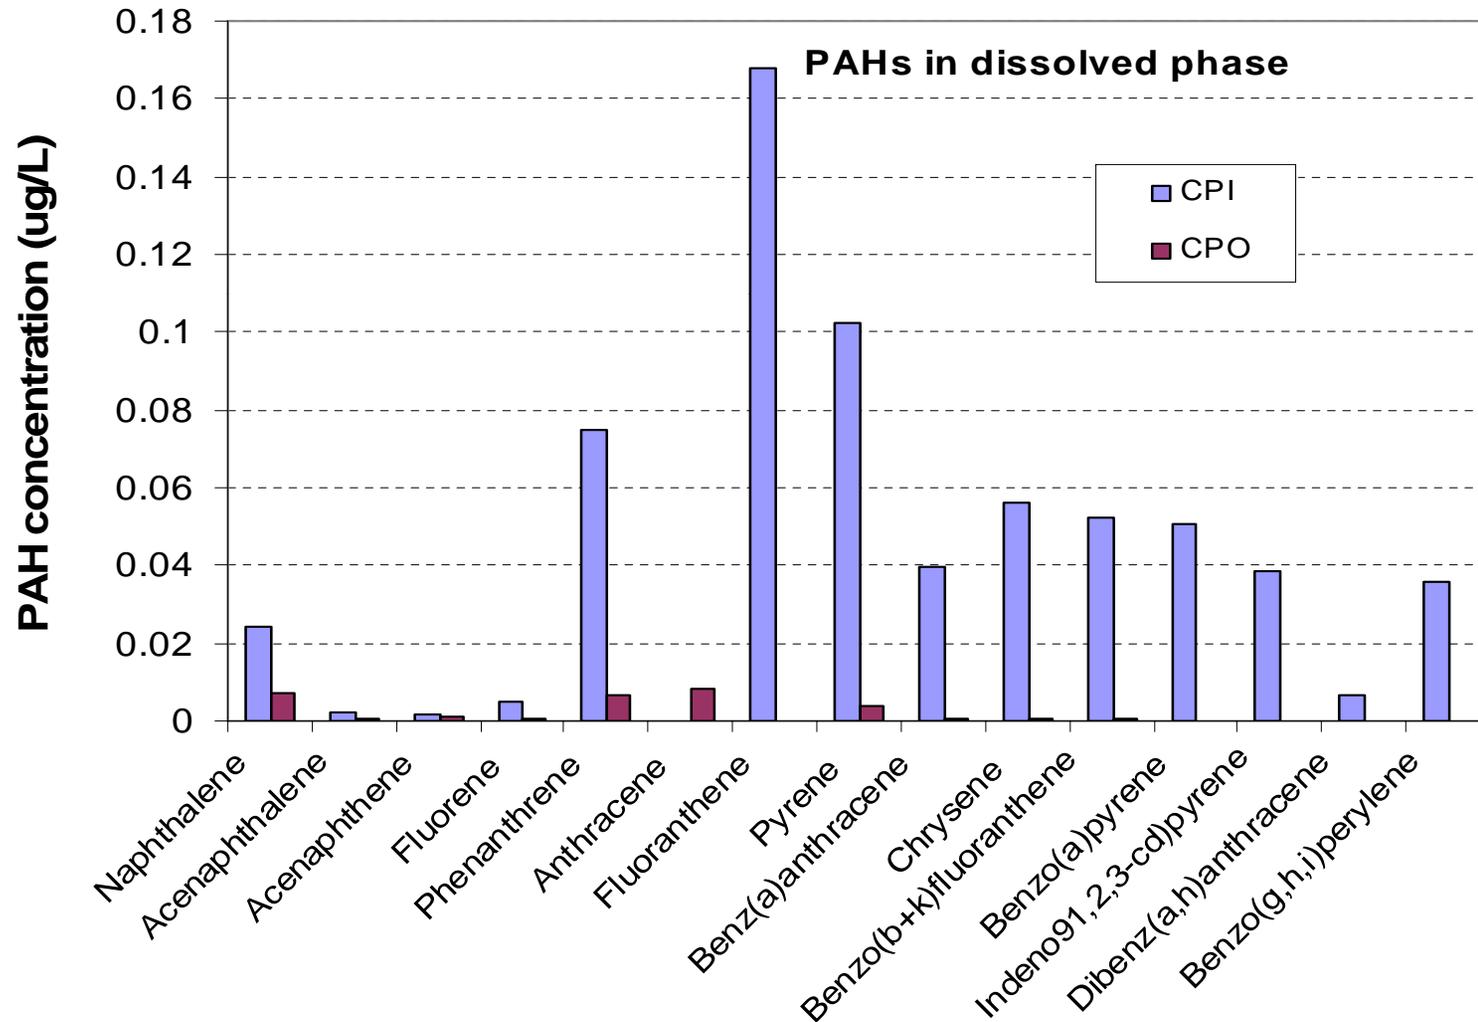

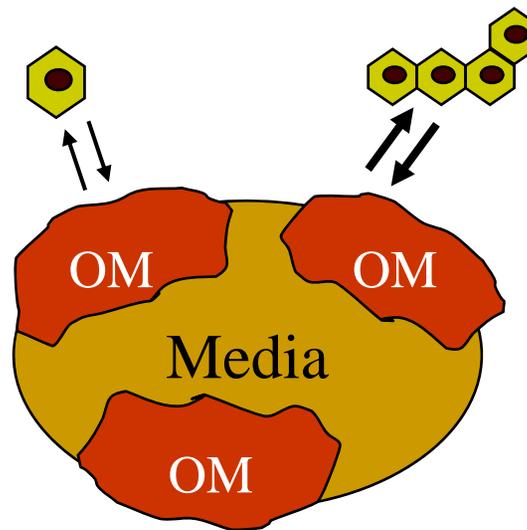

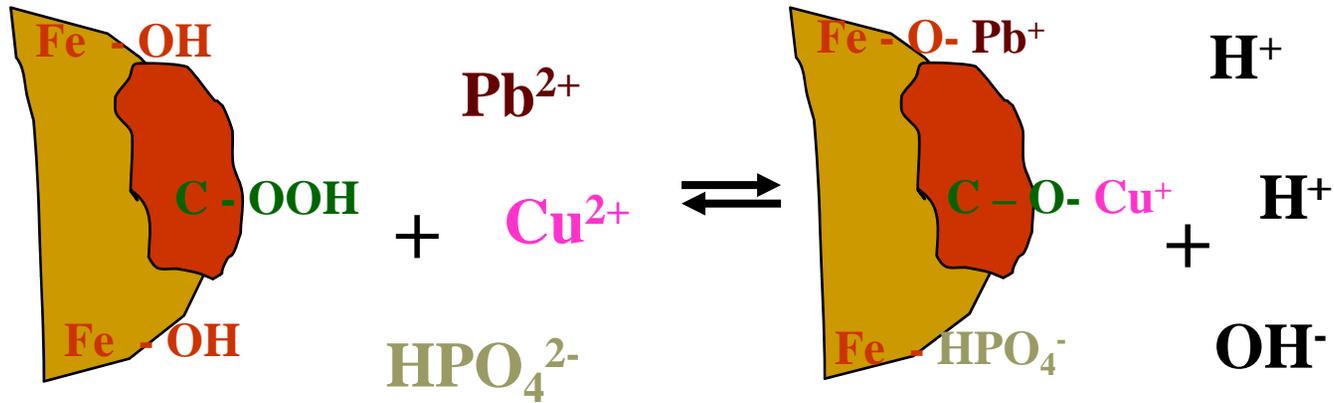

Zinc (CP & SS)

Bioretention PAH (CP)

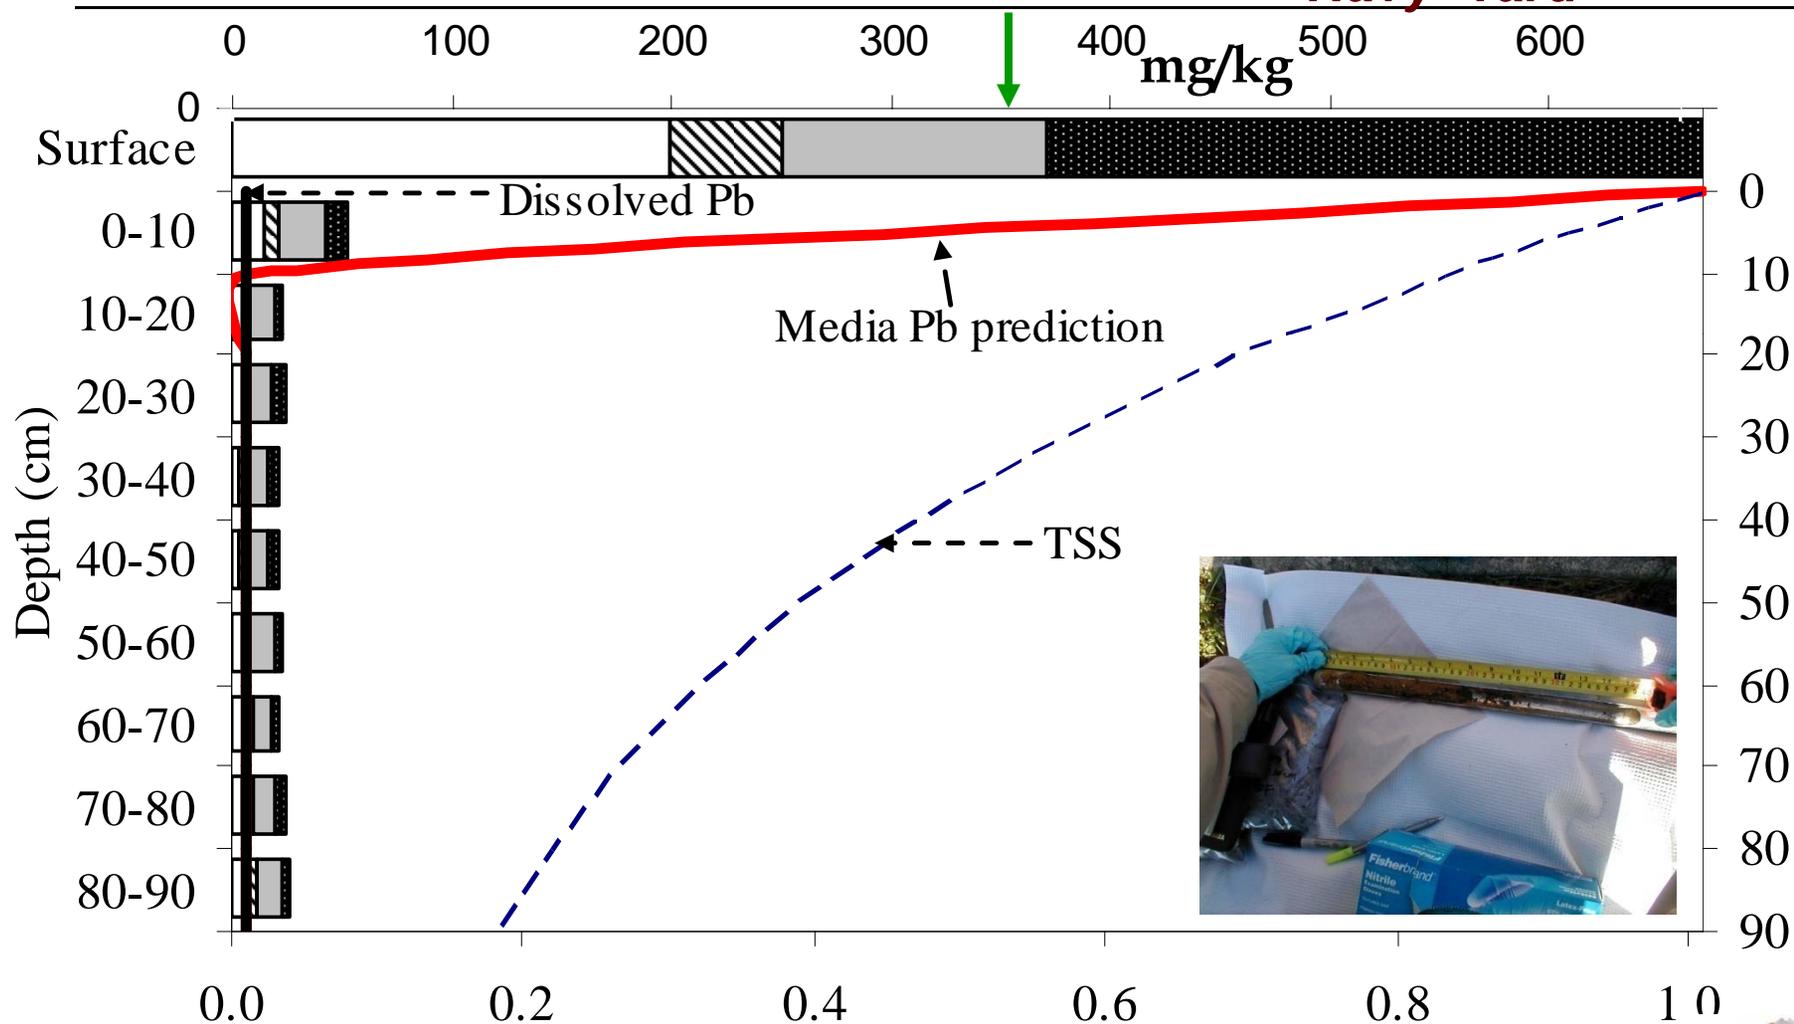

Metal & Organic Adsorption

Metals Accumulation - Pb

Navy Yard

Dimensionless TSS or Normalized Captured Pb Deposit

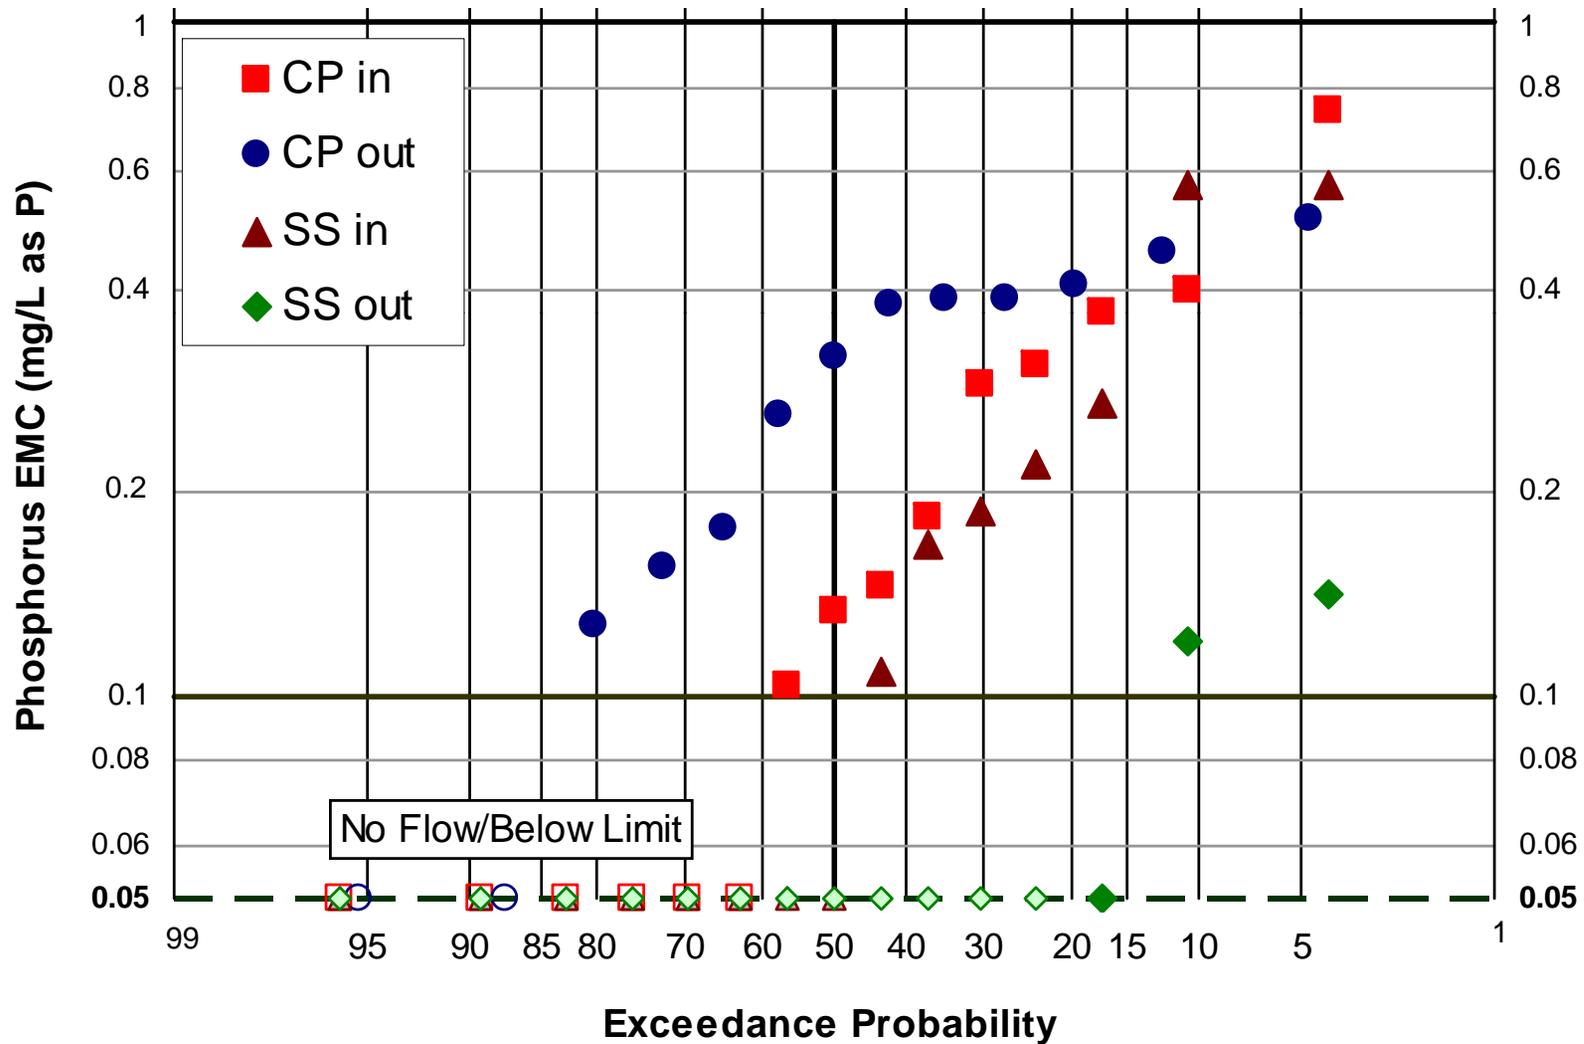

Nitrogen & Phosphorus

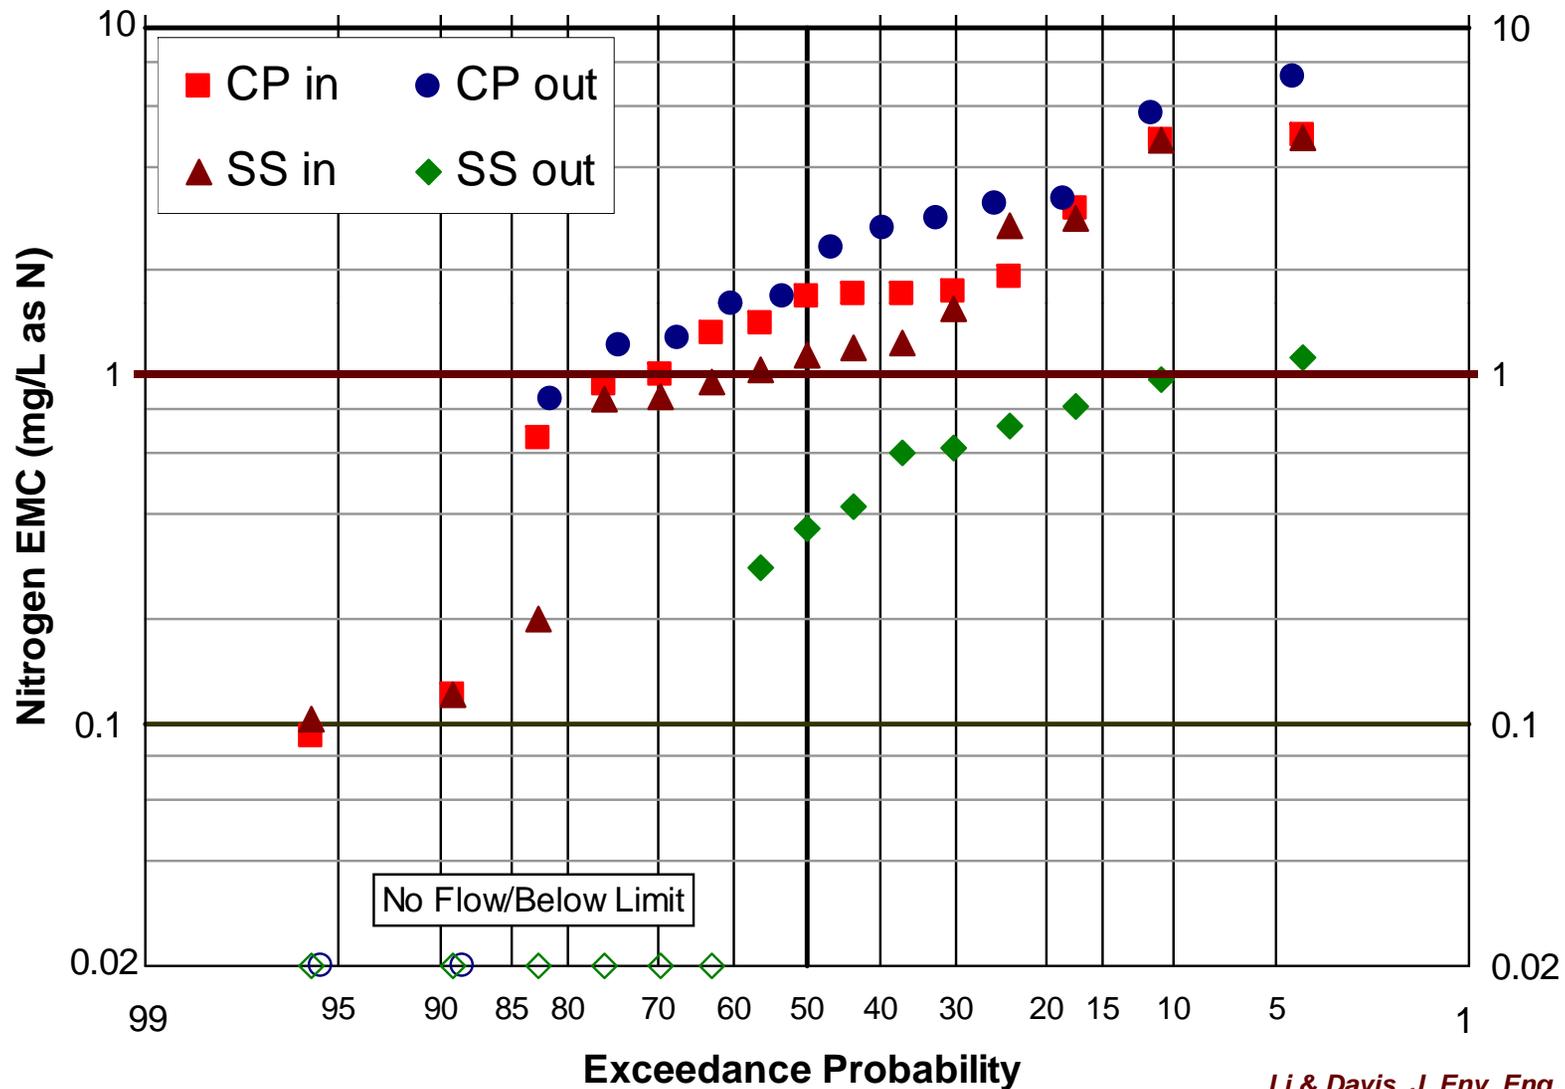

Total Phosphorus (CP & SS)

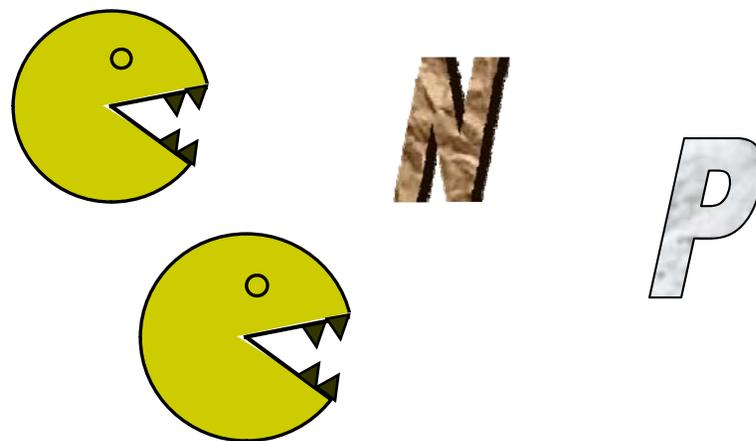

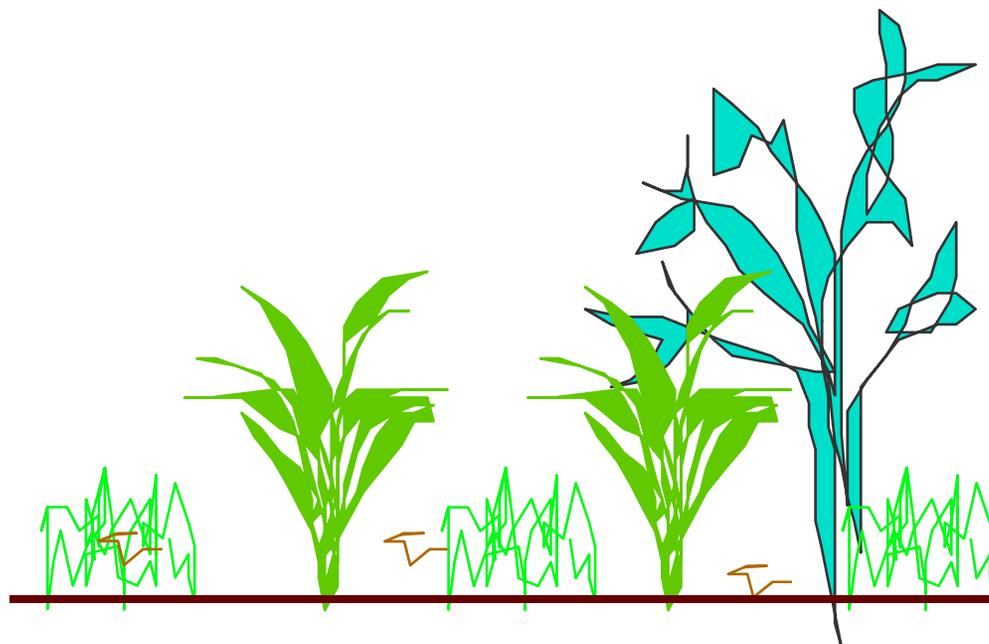

Bioretention TN (CP & SS)

Nutrient Processes

- Phosphorus
 - Filtration
 - Adsorption
 - Bio-uptake
 - Plant Uptake
 - Decay & Discharge

- Nitrogen
 - Nitrification
 - Denitrification
 - Plant Uptake
 - Decay & Discharge

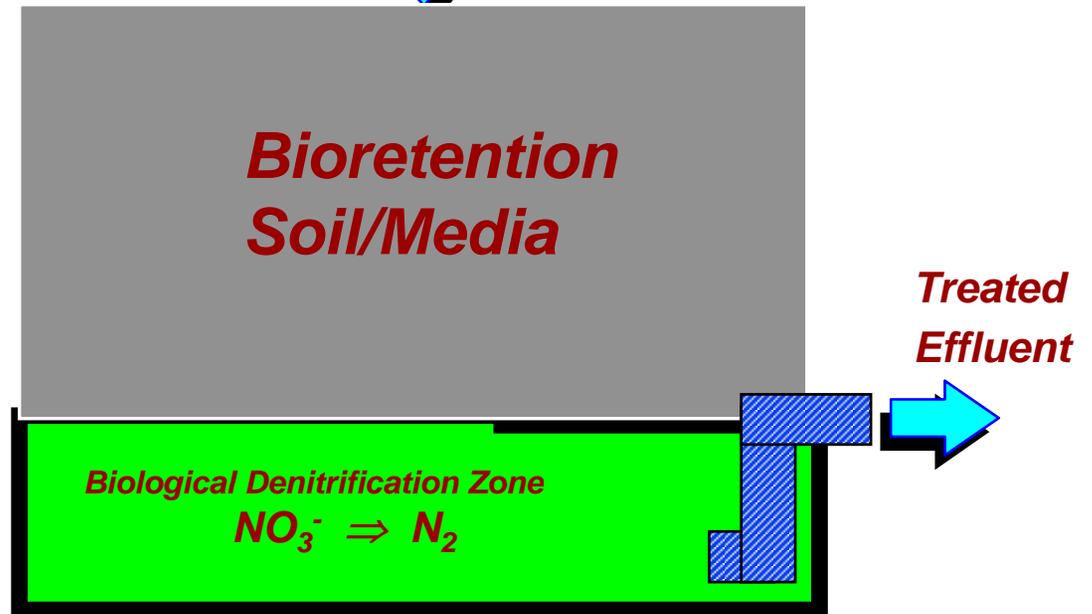

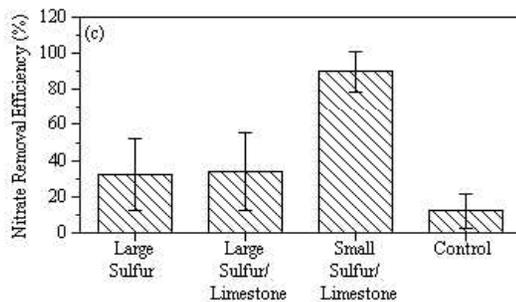

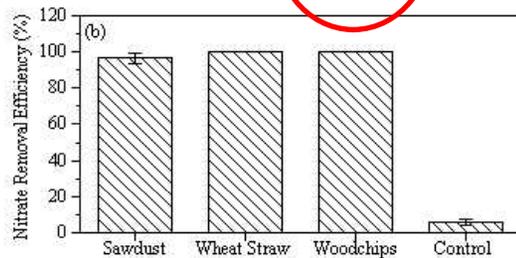

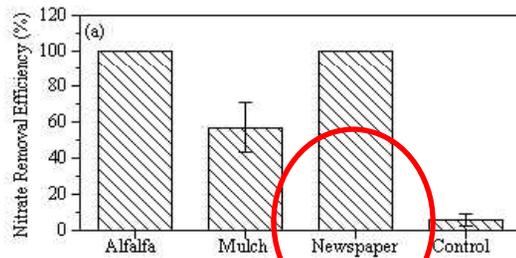

Nitrate

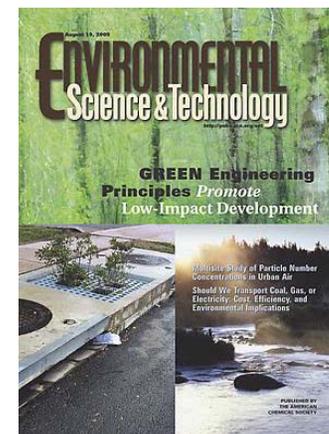

Enhanced Nitrate Removal with Internal Storage

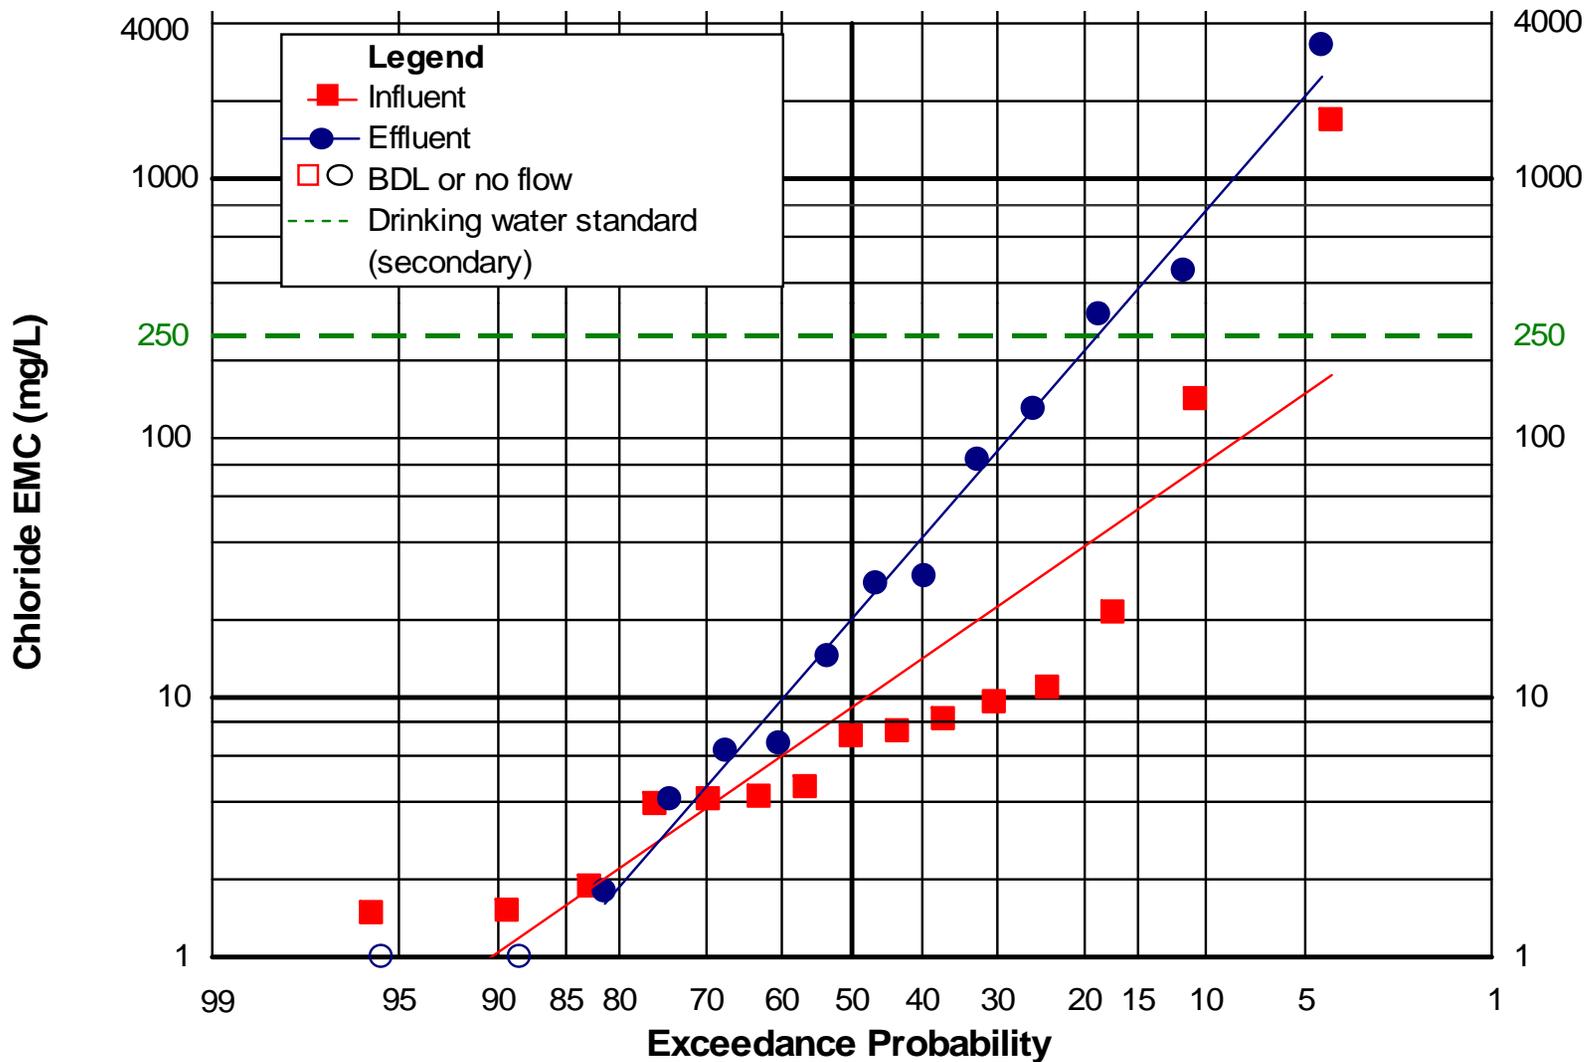

What we know so far...

- **Excellent Management of Hydrology**
 - Media Area & Depth
- **Filtration: Excellent Particulate Matter Removal**
 - Media Depth not Important; Surface Accumulation
- **Adsorption**
 - Metals, PAH Excellent: Surface Accumulation
 - Phosphorus, TKN, Complex, Depth important
- **Biodegradation Processes Important**
 - Denitrification
 - Biological Predation
 - Vegetation in uptake & degradation

Chloride (CP)

Challenges

Practical

- Lack of Understanding
- Space/Utilities
- Regulatory Hurdles
- Inertia
- Contractor Inexperience
- Ownership of Pollutants
- Maintenance

Research

- Long term
- Chloride
- Design/
Performance
- Vegetation
- Variability
- Metrics of Success

Mass Loads (kg/ha/yr)

	CP		SS	
	In	Out	In	Out
